

CSV Caption

Identification and Context

CSV Column	Meaning
service	Service inferred from the folder <code>generated-tests/blackbox/<service>/...</code>
profile	Test profile inferred from the <code><profile></code> folder.
file	Name of the <code>.java</code> file.
class	Name of the file's <code>public class</code> .
test_method	Name of the executed/analyzed test method.
endpoint	Endpoint extracted from the comment or from the method body.
http	HTTP method used by the test, such as <code>GET</code> , <code>POST</code> , or <code>DELETE</code> .
asserted_code	Expected HTTP status code detected in the test.
assert_count	Number of assertions detected in the method.
file_type	Type of EvoMaster-generated file: <code>faults</code> , <code>successes</code> , <code>others</code> , or <code>unknown</code> .
file_path	Absolute path to the <code>.java</code> file.

Structure / Imports

CSV Column	Meaning
imports_count	Total number of imports in the file/class.
wildcard_imports	Number of wildcard imports using <code>*</code> .

Compilation

CSV Column	Meaning
compiled	Whether the class compiled successfully.
compile_error_count	Number of compilation errors detected.
compile_error_types	Types of compilation errors identified by the script.
missing_imports	Number of missing/unresolved imports.
incorrect_imports	Number of incorrect imports detected heuristically.

unused_imports	Unused imports. At the moment, the script hardly fills this field.
dependency_availability_pct	Estimated percentage of imports/dependencies resolved for compilation.
syntax_errors	Number of syntax errors detected.
type_errors	Number of type errors detected.
undefined_variables	Number of undefined symbols/variables.
type_annotation_errors	Number of annotation-related errors.
generic_type_misuses	Number of generic-related misuse errors.
compile_exit_code	Maven exit code during the compilation phase.
compile_timeout	Whether compilation exceeded the timeout.
compile_error_summary	Summary of the main compilation error found.
class_log_dir	Directory containing the class compilation logs.
compile_log_path	Combined compilation log.
compile_stdout_log_path	Compilation stdout log.
compile_stderr_log_path	Compilation stderr log.

Execution

CSV Column	Meaning
runs	Whether the method executed successfully, without error/failure/timeout.
run_detected	Whether there was evidence that the test was executed.
runtime_error_count	Number of runtime errors/failures.
runtime_error_types	Types of runtime errors detected.
run_exit_code	Maven/Surefire exit code during execution.
run_timeout	Whether method execution exceeded the timeout.
execution_seconds	Total execution time of the method.
cpu_seconds	CPU time consumed by the execution process.

peak_working_set_mb	Peak memory usage of the process during execution.
run_error_summary	Summary of the main runtime error.
method_log_dir	Directory containing the method logs.
run_log_path	Combined execution log.
run_stdout_log_path	Execution stdout log.
run_stderr_log_path	Execution stderr log.

Which CSV Columns Should Be Used to Fill the Final Spreadsheet

Column Final Sheet	Column CSV - Python
Compiled?	compiled
No of Errors	compile_error_count
Type of error(s)	compile_error_types
No of missing imports	missing_imports
No of incorrect imports	incorrect_imports
No of Unused imports	unused_imports
% dependency availability	dependency_availability_pct
No of syntax errors	syntax_errors
No of linting violations	—
Code duplications?	—
No of framework keyword violations?	—
Assertions valid for the framework?	asserted_code, assert_count, compile_error_types, runtime_error_types, run_error_summary

No of type errors	type_errors
No of undefined variables	undefined_variables
No of type annotation errors	type_annotation_errors
No of generic type misuses	generic_type_misuses
No non-framework methods were called	—

Runs on the selected framework without error?	runs
Throw errors/exceptions?	runtime_error_count, runtime_error_types, run_error_summary
Shows run time anomalies (unexpected outcomes)?	runtime_error_types, run_error_summary, run_log_path
Timed out?	run_timeout
Hung up?	run_timeout, run_error_summary, run_log_path

Cost	execution_seconds, cpu_seconds, peak_working_set_mb
Test flakiness (#Failed/#Runs)	runs, runtime_error_count

Resource usage (Memory, CPU time)	peak_working_set_mb, cpu_seconds
Mean execution time per Test Case	execution_seconds
Average Error of Execution Time	—

Cyclomatic complexity	—
Adheres to Design Patterns?	—
Maintainability Index	—
Follows coding conventions?	—
Cognitive Complexity Metric	—
Logical LOC	—
Organized according to AAA?	assert_count, file_path, run_log_path
Number of duplicated code segments	—

% of code that is duplicated	—
No of long tests	—
Dead code percentage	—
Comment lines ratio	—
No of TODO/FIXME	—
% of tests with exception handling	—
Is exception handling needed?	runtime_error_types, run_error_summary, endpoint, http
No of wildcard imports	wildcard_imports
No of assert statements	assert_count
